# Programming in Python

Introduction to programming in Python.

- Easy to use/implement/test/debug

- Popular

- Concise

- Highly supported
  - "The Arduino of the programming languages"

- Python = Interpreted (aka script)

- C++ = Compiled to executable

- Python 2.x = Bug Fixes only. No new development
  - Support legacy code
  - Not recommended for new designs
  - Plan to phase out
  - Morons still using

- Python 3.x = Current Development

  Version 2 and Version 3 ARE NOT COMPATABLE!!!!

  If googling for help, make sure it's for Python3

- Tuesdays & Thursdays at 5pm

- 15 – 30 minutes

- Each session, introduce a new concept

- Every Thursday, I'll suggest a small assignment that no one will do anyways
